KMGcompany.com

KMG provides panels for numerous display systems. They are produced using the highest quality materials and workmanship and include all the required clips and magnets.

Exceptional Quality

Each panel is printed on Lambda flex to ensure optimal image quality. For maximum durability panels are encapsulated with a 5 mil face and 10 mil white opaque back.

Lambda flex includes an unconditional replacement guarantee on workmanship and delamination.

Unbeatable Service

You will work directly with a knowledgeable Project Manager or KMG principal who is dedicated to your company -- that is why KMG is known for exceptional service and boasts one hundred percent client retention.

Supported Display Systems

Abex, Skyline, Nomadic, Pro Displays, Intex, and more...

KMG has long been associated with an industry pioneer of digital sublimation printing. During that time, we have provided the most reliable service and highest quality fabric prints available. With our access to a range of equipment and Photo Fabric™ technology, there is no one with a greater combination of capacity, knowledge, and fabric solutions.

Unequaled Capacity

KMG production resources have been long time leaders in fabric sublimation accruing more printing and finishing capacity than anyone else in the industry.

Exceptional Quality

Our Photo Fabric™ images have exquisite detail and resolution; providing the richest and most vibrant colors available, anchored by the deepest dye-sub black in the industry.

Multiple Options

With material ranging from a sheer Voile to a heavy Poly Duck, and custom finishing options, KMG provides you with the options needed to create any look and feel.

Unbeatable Service

You will work directly with a knowledgeable Project Manager or KMG principal who is dedicated to your company -- that is why KMG is known for exceptional service and boasts one hundred percent client retention.

Special Event: Poplin

Trade Show: Moss Knit

Environmental Graphics: Satin

Photo Fabric™ is a unique method for printing photo realistic prints on fabric using cutting edge digital printing technology. We offer three different options, depending on your width and project requirements.

	Photo Fabric™		Photo Fabric™ Large		Photo Fabric™ Grand	
Print Width	Up to 52"w		Up to 96"w		Up to 120"w	
Stock Fabrics	Poplin	Satin	Poly Duck	Dacron	Voile	Duet
	Moss Knit	Fabric Mesh	Oxford	Suede	Moss Green Knit	And More...

Note: All available Flame Retardant.

Digital Offset printing is a unique low cost method for producing superior quality fabric graphics. Our customized equipment allows for as few as 20 banners to be produced at pricing comparable to larger volume runs. With our extensive selection of fabrics and ability to color manage individual elements of an image you are assured unrivaled options and accuracy.

Low Prices & High Quality

With customized Digital Offset equipment, you can now get the quality of offset sublimation with the low pricing of screen printing.

Quick Turn Time

Our unequaled capacity allows us to produce 160 2' x 3' banners in as quickly as 4 days without compromising quality.

Wide Selection

We offer over 10 different stock fabrics, ranging from a heavy durable Poly Duck to a sheer flowing Voile. All stock materials are available in certified flame retardant.

Exceptional Color

With access to exclusive sublimation technology, we are able to produce fabric graphics that are vibrant in color and true to your original art. Our exceptional color management techniques allow us to isolate and adjust specific elements of a file.

Quantity	Minimum of 50 qty. per design	Minimum of 20 qty. per design
Size	Min. Size: 3 sq. ft. Max. Size: 4' x 10'	Min. Size: width & height both greater than 4 ft. Max. Size: 10' x 30'
Stock Fabrics	Poplin Poly Duck Dacron Satin Knit Voile	Fabric Mesh Oxford Suede Remay Moss Green Knit
Note: All available Flame Retardant.	Duet Moss Knit	Engineered Fabrics Satin Moss Knit Serenity Moss Green Knit
Proofs	Proofs can be shipped the day after receiving approved art. Digital Offset and Digital Offset Grand allow for unlimited proofs. Ask your Project Service Manager for details.	Voile Oxford And More . . .

Photo Flag™ technology is a breakthrough digital print process that causes graphics to bleed through the fabric, allowing them to be seen from both sides.* It is the perfect solution for flags, street pole banners, outdoor events, indoor displays, and anywhere else a double-sided graphic is needed.

Exceptional Double-Sided Quality

Graphics printed with Photo Flag™ technology have excellent detail and smoothness as well as rich vibrant colors on both sides of the fabric. Choose between an open weave fabric for minimal wind resistance or a closed weave fabric for optimal detail.

Value

Photo Flag™ uses proprietary technology to economically print double-sided graphics up to 120" wide, even in low quantities.

Quick Turn Time

Our unequaled capacity allows us to produce jobs quickly without compromising quality.

Front

Back

Open Weave Fabric

Closed Weave Fabric

*Amount of bleed through will vary depending on color(s).

KMG understands that when fabric graphics are being used with fixed hardware displays such as truss, extrusions, or pop-up systems, the finishing requirements need to be very precise. In order to meet the exacting demands of these projects, a design engineer reviews each job to ensure that fabric selection, sizing, stretch factors, attachment methods and all other technical aspects are met. We have several different Engineered Fabric options to assure the best fit and look for your various structure needs.

Expertise

Exclusive substrates, unique methods for attaching graphics, and technical knowledge of multiple hardware systems enables KMG to offer a variety of engineered graphic solutions to fit the needs of your project.
